

## **300 Seconds Thesis Competition**

**The 300 Seconds Theses Competition** was marked by an atmosphere of intellectual energy, curiosity, and fresh perspectives, unfolding as a meaningful celebration of knowledge and discovery. Students delivered remarkable presentations across a broad spectrum of physics, reflecting the depth of the discipline and fulfilling the primary objective of the gathering — to familiarize juniors with the basic work being undertaken in the respective fields and to highlight the diverse opportunities the discipline encompasses.

A highlight of the program was the engaging Q&A session, where questions blossomed into dialogue and the audience became active contributors, turning the atmosphere into one of shared exploration. The excitement reached its height as the gathering celebrated outstanding contributions — **with the Students' Choice Award presented to Himanshu Pant and the Jury's Choice Award bestowed upon Dibyajyoti Mech**, a recognition that perfectly crowned the evening's spirit of curiosity and excellence.

We were graced by the presence of our distinguished judges, whose guidance and encouragement brought immense depth to the experience and will always be treasured. Sincere credits to the Physics Club members, whose dedication and creativity turned vision into a truly inspiring reality.

The evening drew to a close with minds alight and spirits uplifted, carrying forward fresh insights and the glow of curiosity thereby giving a gentle spark destined to kindle endless journeys of discovery.
